

MAGNA CG8-H-BL

STRONG ACID CATION

BLACK POLYSTYRENIC GEL
8% CROSSLINKED
HYDROGEN FORM

ResinTech CG8-H-BL is a dark-colored hydrogen form 8% cross-linked gel strong acid cation resin. It is a workhorse cation resin with properties similar to other products in the CG8 family. CG8-H-BL is intended for use in all industrial applications such as demineralization where a hydrogen form cation resin is required and for mixed beds where its dark color makes visual identification of the cation/anion interface plainly evident.

APPLICATIONS

- Demineralization
- Cation Component in Mixed Beds

DEMINERALIZATION

CG8-H-BL can be used as the cation component in separate bed and mixed bed demineralization applications where a hydrogen form cation resin is coupled with a hydroxide form anion resin. Regeneration is accomplished with stepwise sulfuric acid or with hydrochloric acid.
