MBD-10

MIXED BED

HIGH-PURITY MIXED BED
POLYSTYRENIC GEL
H / OH FORM

ResinTech MBD-10 is a 2:3 volumetric mixture of CG8-H-BL (dark-colored hydrogen form cation resin) and SBG1-OH (a hydroxide form type 1 strong base anion resin). The volume ratio is close to 1:1 on an equivalent basis and the component resins are chosen to separate easily for regeneration. MBD-10 is intended for use in all mixed bed deionization applications that require high resistivity and high throughput capacity.

APPLICATIONS

- Cartridge Applications
- Portable Exchange Deionization (PEDI)
- High Temperature Applications
- In Place Regeneration

Mixed Bed throughput capacity is based on the stated inlet conductivity of neutral pH waters and run to a 1 uS/cm endpoint. TDS is based on NaCl (2.5uS/cm/ppm as $CaCO_3$). Different salts may have different contributions to TDS. Capacity is based on the anion component and is for virgin resin. Following the initital exhaustion and regeneration subsequent cycles will likely be shorter, depending on how skillfully the resins are separated, regenerated, and remixed.

CATRIDGE USE

ResinTech MBD-10 premixed mixed bed is ideal for single use cartridge applications where the longest possible throughput capacity is desired.

PORTABLE EXCHANGE DEIONIZATION (PEDI)

ResinTech MBD-10 can be used in PEDI applications to remove bulk TDS from raw waters or to remove trace levels of TDS following reverse osmosis or other desalination processes. MBD-10 can be separated into its components, CG8-H-BL and SBG1-OH, for regeneration, and reused hundreds or thousands of times. The cation component, CG8-H-BL, is black in color and provides optimized color difference from SBG1-OH. This color difference is very helpful to verify resin separation during backwash.
